GLOBAL REMOTE TECHNOLOGIES LTD.

TURNAROUND SERVICES

Trained management teams coordinate turnaround operations during critical events and ensure every step in the process is accurately executed.

Today's competitive market leaves little room for costly down time and missed deadlines or unprecedented financial penalties for late recoveries. Whether for a small outage/TAR, emergency repair, capital project tie-ins, or major TAR or shutdowns, Global Remote Technologies has the management and staffing expertise to safely, successfully and efficiently execute these time-critical events. GRT support staffing for TARs/outages is carefully selected by taking into account the equipment coming out of service as well as the scope of work necessary. GRT professionals are matched by personnel whose background and certifications best qualify them for the job.

With decades of successful experience, Global Remote Technologies has the finest turnaround planners and coordinators available. They work closely with clients to develop implementation plans that commence far in advance of the TAR start date and include post-project performance reviews. GRT's turnaround teams follow a disciplined, multi-phase approach to planning, scheduling, staffing and executing turnarounds in a timely and cost effective manner.
